Submitted (MG-2002) to the Embl.Genbank/DBJ databases.
-!- PTM: 4'-phosphopantetheine is transferred from CoA to a specific
serine of the protein (By similarity).
-!- SIMILMATTY: Contains 1 acyl carrier domain.

GENERAL ISTA-108

Sequence 108, Application US/09551151A

Patent No. 6803358

GENERAL INFORMATION:
TITLE OF INVENTION: Variant of Cancer,
TITLE OF INVENTION: Viral or Parasitic Infections
TITLE OF INVENTION: Viral or Parasitic Infections
TITLE OF INVENTION: Viral or Parasitic Infections
CURRENT APPLICATION NUMBER: US/09/551,151A

CURRENT PILING DATE: 1900-04-14

PRIOR FILING DATE: 1999-10-29
NUMBER OF SEQ ID NOS: 142

SEQ ID NO 108

LENGTH: 31
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     OTHER INFORMATION: Mutant preproricin linker region for MMP-11, pAP-284

Patent No. 5635177

GENERAL INFORMATION:
APPLICANT: Bennett, Brian D.
APPLICANT: Goeddel, David
APPLICANT: Lee, James M.
APPLICANT: Teal, Siao Fing .
APPLICANT: Wood, William
APPLICANT: Wood, William I.
ITILE OF INVENTION: APROFEIN TRROSINE KINASE AGONIST
ITILE OF INVENTION: ANTIBODIES
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             US-09-621-976-4733

US-09-621-976-4733

Sequence 4733, Application US/09621976

Patent No. 6639063

APPLICANT: Dumas Milne Edwards, J.B.

APPLICANT: Jobert, S.

TITLE OF INVENTION: ESTS and Encoded Human Proteins.

TITLE OF INVENTION: ESTS and Encoded Human Proteins.

Sequence 6561, Application US/09134000C

Patent No. 6617156

Patent No. 6617156

GENERAL INTERNATION:

APPLICANT: LYND DOUGETE-Stamm et al

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO

TITLE OF INVENTION: ENTERCOCCUS FAECALIS FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: BYTERCOCCUS FAECALIS FOR DIAGNOSTICS AND THERAPEUTICS

CURRENT APPLICATION NUMBER: US/09/134,000C

CURRENT FILING DATE: 1998-08-13

PRIOR APPLICATION NUMBER: US 60/055,778

PRIOR PLING DATE: 1997-08-15

NUMBER OF SEQ ID NOS: 6812

SOFTWARE: Patentin version 3.1

SEQ ID NO 6561
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

Patent No. 6783961

GENERAL INFORMATION:
APPLICANT: Dunas Milne Edwards, J.B.
APPLICANT: Dunclert, A.
APPLICANT: Dunclert, A.
TITLE OF INVENTION: Expressed Sequence Tags and Encoded Human Proteins.
Patent No. 6783961

FILE REFERENCE: 59.US2.REG
CURRENT APPLICATION NUMBER: US/09/513,999C

CURRENT FILING DATE: 2000-02-24

FRIOR APPLICATION NUMBER: US 60/122,487

PRIOR FILING DATE: 1999-02-26

NUMBER OF SEQ ID NOS: 36681

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 11065, Application US/09489039A

Patent No. 6610836
GENERAL INFORMATION:
APPLICANT: Gary Breton et. al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO KLEBSIELLA
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO KLEBSIELLA
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO KLEBSIELLA
TITLE OF INVENTION: PREUMONIAE FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 2709-2004001
CURRENT FILING DATE: 2000-01-27
PRIOR APPLICATION NUMBER: US 60/117,747
PRIOR APPLICATION NUMBER: US 60/117,747
PRIOR FILING DATE: 1999-01-29
NUMBER OF SEQ ID NOS: 14342
SEQ ID NO 11065
LENGTH: 66
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

No. 2.8e+02; Matches 4; Conservative 0; Mismatches 0; Indels
ORGANISM: herpes simplex virus type 1 (HSV1)
NAME/KEY: peptide of HSV1 gene US10 polypeptide
LOCATION: 192 TO 282
OTHER INFORMATION: peptide homologous to the US10 gene
OTHER INFORMATION: polypeptide of MDV
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               NAME/KEY: peptide of HSV1 gene US10 polypeptide

Patent No. 6703491

Patent No. 6703491

GENERAL INFORMATION:
APPLICANT: Homburger et al.
TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster FILE REFERENCE: File Reference: 7326-094

CURRENT APPLICATION NUMBER: US/09/270,767

CURRENT FILING DATE: 1999-03-17

NUMBER OF SEQ ID NOS: 62217

SOFTWARE: PatentIn Ver. 2.0

SEQ ID NO 50808

LENGTH: 93

Sequence 29, Application US/08793624C

Patent No. 6150093

GENERAL INFORMATION

APPLICANT: Chang, Yuan

APPLICANT: Chang, Yuan

APPLICANT: Moore, Patrick S.

TITLE OF INVENTION: Unique Associated Kaposi's Sarcoma Virus Sequences And

TITLE OF INVENTION: Uses Thereof

FILE REFERENCE: 45185-C-PCT-US/JPW

CURRENT APPLICATION UNMBER: US/08/793,624C

CURRENT PILING DATE: 1997-02-18

NUMBER OF SEQ ID NOS: 58

SEQ ID NO 29

LENGTH: 120
              APPLICANT: MOOFE, PALTICK S.
TITLE OF INVENTION: UNIQUE ASSOCIATED KAPOSI'S SARCOMA VIRUS
TITLE OF INVENTION: SEQUENCES AND USES THEREOF

Sequence 11756, Application US/09902540

Patent No. 683347

GENERAL INFORMATION:
APPLICANT: Goldman, Barry S.
APPLICANT: Glodman, Barry S.
APPLICANT: Slater, Steven C.
APPLICANT: Slater, Steven C.
TITLE OF INVENTION: Myxococcus xanthus Genome Sequences and Uses Thereof;
FILE REFERENCE: 38-10(15849)B

CURRENT APPLICATION NUMBER: US/09/902,540

CURRENT FILING DATE: 2001-07-10

PRIOR PLLING DATE: 2000-07-10

PRIOR PLLING DATE: 2000-07-10

NUMBER OF SEQ ID NOS: 16825

SEQ ID NO 11756

LENGTH: 118
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

Patent No. 6703491

GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster
FILE REPRENCE: File Reference: 7386-094

CURRENT APPLICATION NUMBER: US/09/270,767

CURRENT PILING DATE: 1999-03-17

NUMBER OF SEQ ID NOS: 62317

SOUTHER PATENTALION OF SEQ ID NOS: 62317

SEQ ID NO 39085

LENGTH: 131

HUNGTH: 131
Sequence 663, Application US/09732210

Batent No. 6573361

BAENERAL INFORMATION:
APPLICANT: Bunkers, Greg J.
APPLICANT: Liang, Jihong
APPLICANT: Mittanck, Cindy A.
APPLICANT: Mittanck, Cindy A.
APPLICANT: Wu, Younie S.
ITLE OF INVENTION: AALI-fungal Proteins and Methods for Their Use
FILE REPERENCE: 38-21(15036)B
CURRENT APPLICATION NUMBER: US/09/732,210
CURRENT FILING DATE: 1999-12-07
PRIOR PILING DATE: 1999-12-07
PRIOR PILING DATE: 1999-12-07
PRIOR PILING DATE: 1999-12-07

Sequence 2332, Application US/09540236

Patent No. 6673910

GENERAL INFORMATION:

TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: 2709.2005-001

CURRENT APPLICATION NUMBER: US/09/540,236

CURRENT FILING DATE: 2000-04-04

NUMBER OF SEQ ID NOS: 3840

SEQ ID NO 2332
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 4518, Application US/09328352;
Patent No. 6562958;
GENERAL INFORMATION:
TITLE OF INVENTION: WCLEIC ACID AMINO ACID SEQUENCES RELATING TO ACINETOBACTER;
TITLE OF INVENTION: BAUMANNII FOR DIAGNOSTICS AND THERAPEUTICS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

Patent No. 6703491

GENERAL INFORMATION:
APPLICANT: Homburger et al.
TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster
FILE REPERENCE: File Reference: 7326-094
CURRENT APPLICATION NUMBER: US/09/270,767
CURRENT FILING DATE: 1999-03-17
NUMBER OF SEQ ID NOS: 62517
SOFTWARE: PatentIn Ver. 2.0
SEQ ID NO 52481
LENGTH: 136
